World Kidney Day 2021 is all about “Living Well with Kidney Disease”.

The objective is to increase education and awareness about effective symptom management and patient empowerment, with the ultimate goal of encouraging meaningful participation in everyday life. Whilst effective measures to prevent kidney disease and its progression are important, patients with kidney disease – including those who depend on dialysis and transplantation – and their care-partners should also feel supported, especially during pandemics and other challenging periods, by the concerted efforts of kidney care communities.

We call for the inclusion of life participation as a key focus in the care of patients with CKD and as a building block towards delivering the ultimate goal of living well with kidney disease.
