WORLD KIDNEY DAY DOCUMENTATION

Objectives:

1. To make people aware of the importance of our kidneys and teach them how to take care of them.
2. To encourage them to get tested for kidney disease if they are at risk and help them to cope with the consequences of having kidney disease.
3. To promote prevention of kidney disease and quality of life.

Summary:

A total of 53 participants had gathered to celebrate the World Kidney Day 2016 “Kidney Disease and Children: Act Early to Prevent It.” The participants composed of 18 Kidney Transplant donors and their relatives, 10 dialysis patients’ relatives and 19 RMC OPD attendees. The lay forum was conducted in Kidney Foundation of the Philippines, Inc (KFPI) and Pedia Department of Rizal Medical Center (RMC) that highlighted the importance of educating the parents, relatives and children to prevent kidney disease among children and adolescents. This is in accordance with the theme for World Kidney Day. Dr. Jayson Malaluan as our Speaker/Lecturer of the day he emphasize the awareness and prevention of kidney disease. We also do a pre-test and post-test to assess their knowledge about the topic. Please see attached summary report. The Kidney Foundation of the Philippines, Inc. gives 10 free urinalysis test for the relatives (please see attached list of winners). The free urinalysis test is one of our strategies to encourage relatives to know and have an early detection if they have kidney disease.
